Name	MISS.VARSHINI I	Patient ID	AS_PRR_CT_8097
Accession No	8097_262169_08	Age/Gender	020Y / Female
Referred By	APOLLO HOSPITAL	Date	06-Mar-2026

LOW DOSE CT REPORT – WHOLE ABDOMEN (NON CONTRAST)

TECHNIQUE: Volume scan of the whole abdomen was made from xiphisternum to pubis without administration of IV Contrast. MPR & SSD / VR images were obtained.

OBSERVATION :

Liver is enlarged in size measuring upto 16.6 cm in diameter and shows uniform density. No obvious focal lesion is seen. CBD is not dilated.

Gall Bladder - It is distended and normal.

Pancreas is normal in size and density. No calcification or peripancreatic fluid collection seen. The pancreatic duct is not dilated.

Spleen is normal in size and density.

Both adrenals appear normal in size and shape.

Right kidney is normal in size. Pelvicalyceal system not dilated. Ureter is not dilated. No radiodense calculus is seen. The vesico-ureteric junction appears normal.

Left kidney is normal in size. Pelvicalyceal system not dilated. Ureter is not dilated. No radiodense calculus is seen. The vesico-ureteric junction appears normal.

There is no mass or lymphadenopathy seen in the retro peritoneum.

No obvious bowel dilatation seen.

The appendix measures 5 mm in maximum luminal diameter. No evidence of any periappendiceal fat stranding or free fluid. No evidence of acute appendicitis.

The **bladder** is normal. No evidence of diverticulum or calculus.

Uterus - It is normal in size and shape. No obvious adnexal mass lesion seen.

Mild free fluid is noted in the pouch of Douglas likely physiological.

Hyperdense metallic plates and nails are noted at the level of L4 and L5 vertebra giving streak and beam hardening artefacts - post operative status.

IMPRESSION:

Clinical Indication: H/O 5 DAYS OF LOWER ABDOMINAL PAIN AND URINE IRRITATION , VOMITHING , TO RULE OUT APPENDICITIS

Previous reports available: Yes

- No CT evidence of acute appendicitis. Appendix appears normal in caliber with no periappendiceal fat stranding or free fluid.
- Mild hepatomegaly (liver measuring 16.6 cm) with otherwise no focal hepatic lesion.
- Mild free fluid in the pouch of Douglas likely physiological.
- Post-operative status at L4–L5 level with metallic plates and screws causing streak and beam hardening artefacts.

Limitation of computer tomography:

- 20% of gall bladder stones is not visualized on CT.
- Fibroid without contour abnormality and endometrial abnormalities is not seen on CT.

For any report clarifications, doctors can contact 7824-860997 from 9am – 8pm.
